AIMS AND SCOPE: *Experimental Heat Transfer* seeks to provide a forum for papers dealing with measurement techniques and with results of experimental studies in heat and mass transfer and in related fluid flows. The papers should contain original experimental information that enhances the basic understanding of heat and mass transfer and fluid flow problems and their applications and may include related theory, analysis, and numerical studies. The journal will consider for publication the following types of material: contributed papers, technical notes, invited papers, letters to the editor, and book reviews, the latter by invitation. All contributions will be evaluated by referees and an editor.
